

Ananya Iyer

Software Engineer (Backend → AI)

Summary

Backend engineer with steady experience maintaining internal tools, recently moved into applied AI work. Comfortable with Python and standard web APIs; still building depth in AI-specific tooling.

Experience

Software Engineer II — Bridgepoint Systems (Jun 2021 – Present, 4 years)

- Maintains Python/FastAPI microservices for an internal ops platform used by a few internal teams.
- Helped migrate part of the document ingestion pipeline to use OCR-based extraction for scanned forms.
- Over the last 1.5 years, started building an internal RAG-based support-ticket assistant: set up a retrieval pipeline (LangChain + Chroma); team estimated answer accuracy improved by around 40% based on informal review.
- After a production incident (see interview), introduced a pre-deploy checklist for prompt changes that the team adopted.

Junior Backend Developer — Bridgepoint Systems (Jul 2019 – Jun 2021, 2 years)

- Built basic REST APIs for internal tooling.
- Worked with QA and product to define API contracts.

Skills

Python, FastAPI, MongoDB, PostgreSQL, LangChain, Chroma, basic React, OCR pipelines (Tesseract), Docker

Education

B.E. Information Technology, 2019

Note

Has not used multi-agent orchestration frameworks (LangGraph, CrewAI, AutoGen) in production — most LLM work to date has been a single-agent RAG pipeline.
